

PartsEye brings the power of information to service parts networks

We know the only parts that matter are those available to the customer.

Automatically have the right parts on-hand

PartsEye creates daily optimized suggested stock orders based on your store's actual sales demand and inventory. Typically:

- Fast-moving parts are stocked more efficiently, reducing deployed capital
- Locally stocked part numbers increase up to 50%, resulting in very high service fill rates
- Special orders and related returns are reduced, as more parts filled from stock
- Majority of parts inventory managed by PartsEye, all for less than the value of "time saved" by your Parts Manager.

Enable service CSI

Service department fill rates rise over 90%. Plus, effective service capacity increases along with labor & parts sales through scheduled, discretionary, & upsell services.

Guaranteed Parts Sales

Suggested stock order parts in PartsEye are guaranteed by Hyundai to sell. Any unsold parts after a certain time period can be returned to Hyundai without using any of your accumulated accrual return, subject to Hyundai's usual parts return packaging and related guidelines. We'll even tell your parts staff monthly which parts are eligible for return.
